                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    RESULT 2
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          밁
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         The present invention relates to oligonucleotides encoding polymorphic CC variants of proteins related to amylases, amyloid proteins, angiopoietin, capoptosis related proteins, cadherin, cyclin, polymerase, oncogenes, constones, kinases, colony stimulating factors, complement related proteins, cytochromes, kinasins, cytochines, interferons, interleukins, CC G-protein coupled receptors and thioesterases. The present sequence is cone such oligonucleotide. The oligonucleotides and the peptides encoded CC by them may be used in the prevention, diagnosis and treatment of CC diseases associated with inappropriate expression of the proteins listed CC above. Disorders that may be prevented, diagnosed and/or treated include CC diseases (e.g. rheumatoid arthritis, multiple sclerosis, diabetes, CC systemic lupus erythromatosus and Grave's disease), inflammation, cancer (e.g. cancers of the bladder, brain, breast, colon and kidney, colonies of the mervous system and an infection of pathogenic corrantiess.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           Query Match

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Matches
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               proteins, cytochromes, kinesins, cytokines, interferons, interleukins, G-protein coupled receptors and thioesterases. The present sequence is one such oligonucleotide. The oligonucleotides and the peptides encoded by them may be used in the prevention, diagnosis and treatment of diseases associated with inappropriate expression of the proteins listed above. Disorders that may be prevented, diagnosed and/or treated include multifactorial diseases with a genetic component, such as autolimune diseases (e.g. rheumatoid arthritis, multiple sclerosis, diabetes, systemic lupus erythromatosus and Grave's disease), inflammation, cancer (e.g. cancers of the bladder, brain, breast, colon and kidney, leukaemia), diseases of the nervous system and an infection of pathogenic cruanisms.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                The present invention relates to oligonucleotides encoding polymorphic variants of proteins related to amylases, amyloid proteins, angiopoietin, apoptosis related proteins, cadherin, cyclin, polymerase, oncogenes, histones, kinases, colony stimulating factors, complement related
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Polymorphic nucleic acids encoding e.g. amylases, cyclins, polymerases, oncogenes and histones, useful for diagnosing and treating, e.g. cancer, autoimmune diseases and infections –
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            1313 GGCAAAAAGAATCCCAATGTTTGACAAAACACAGCCAAGGGGATATTTACT 1363
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        Claim 1; Page 1667; 4143pp; English.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                Shimkets RA, Leach M;
           producing sub-population of labeled nucleic acids, useful for analysing differences in RNA profiles between several different physiological sources, using set of distinct gene specific primers .
                                                                                                                   Chenchik A,

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           each gene specific primer has a sequence complementary to a distinct mRNA, and each labeled NA is generated using a single gene specific primer. The method is useful for producing a sub-population of labeled NAs which is useful for analysing the differences in the RNA profiles
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   The invention relates to producing a sub-population of labeled nucleic acids (NAs) comprising contacting a NA sample from a physiological source, with a pool of 50 distinct gene specific primers under suitable
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       between several different physiological sources, where the method comprises producing subpopulation of labeled NAs for the different
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    conditions to enzymatically generate sub-population of NAs, where

The assay is useful for identifying pharmacological agents or lead compounds generally involved in assaying for compounds which regulate or modulate a cell activity. The present sequence is a primer used in the invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  Testing candidate compound affecting cellular NFkappaB JNK, apoptosis activity by comparing cell activity in presence and absence of protein accous species having two death effector domain and test
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           The present invention relates to testing candidate compounds to determine whether they affect NF-kappaB, JNK and apoptosis activit. The method involves the use of 2 death effector domains (DED). The
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Chaudhary PM,
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        07-MAY-1998;

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             (1) has antiinflammatory and cytostatic activities, and can be used in antisense therapy and as an inhibitor of caspase 7 expression. (1) is useful for inhibiting the expression of caspase 7 in human cells or tissues, and for treating a human having a disease or condition associated with caspase 7 including inflammatory condition, hyperproliferative disorder (cancer), or bone metabolism or cholesterol disorder. (1) is useful for diagnostics, therapeutics, prophylaxis and as research reagent and kits. (1) is useful prophylactically to prevent or delay infection, inflammation or tumour formation. The present sequence represents a PCR probe for human caspase 7, which is used in an example from the present invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         The present invention describes a compound (I) 8-50 nucleobases in length targeted to a nucleic acid molecule encoding caspase 7, which specifically hybridises with and inhibits the expression of caspase 7 (I) has antiinflammatory and cytostatic activities.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Novel antisense compounds targeted to nucleic acids encoding caspase for modulating gene expression and treating diseases associated with expression of caspase 7 in humans \cdot
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        1305 TTGCACTTGGCAAAAAGAATCCCAATG 1331

The invention relates to producing a sub-population of labeled nucleic acids (NAS) comprising contacting a NA sample from a physiological source, with a pool of 50 distinct gene specific primers under suitable conditions to enzymatically generate sub-population of NAS, where each gene specific primer has a sequence complementary to a distinct

Example 3; SEQ ID No 1226; 11pp; English.

                                                         Novel antisense compounds targeted to nucleic acids encoding caspase 7, for modulating gene expression and treating diseases associated with expression of caspase 7 in humans -
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  1812 TCTCACCTATCCTGCCCTCACATCTTC 1838
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   mRNA, and each labeled NA is generated using a single gene specific primer. The method is useful for producing a sub-population of labeled NAs which is useful for analysing the differences in the RNA profiles between several different physiological sources, where the method comprises producing subpopulation of labeled NAs for the different physiological sources, comprising the populations for each physiological sources to identify differences in the population, where the comparison is preferably performed by hybridising the labeled NAs for each of the distinct physiological sources to an array of probe NAs stably associated with the sources, and comparing the patterns for each of the sources, and comparing the patterns for each of

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  Human caspase 7 forward PCR primer SEQ ID NO:4.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     the sources, where differential gene expression assays are utilised in differential expression analysis of diseased a normal tissue e.g. neeplastic a normal tissue, or different tissue or subtissue types. The present sequence is a human gene specific PCR primer used in the method of the invention.

Note: The sequence data for this patent did not form part of the printed specification, but was obtained in electronic format directly from USPTO at
                                                                                                                                                                                                                                                                                                                                                                                                                                                                 10-SEP-2001; 2001WO-US28232

B QΥ

The present invention describes a compound (I) 8-50 nucleobases in length targeted to a nucleic acid molecule encoding caspase 7, which specifically hybridises with and inhibits the expression of caspase (I) has antiinflammatory and cytostatic activities, and can be used :

caspase 7. be used in

the sources, where differential gene expression assays

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Matches
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           Query Match
                                                                     mRNA, and each labeled NA is generated using a single gene specific primer. The method is useful for producing a sub-population of labeled NAs which is useful for analysing the differences in the RNA profiles between several different physiological sources, where the method comprises producing subpopulation of labeled NAs for the different physiological sources, comprising the populations for each physiological sources, comprising the population, where the comparison is preferably performed by hybridising the labeled NAs for each of the distinct physiological sources.
                                                                                                                                                                                                                                         The invention relates to producing a sub-population of labeled nucleic acids (NAs) comprising contacting a NA sample from a physiological source, with a pool of 50 distinct gene specific primers under suitable conditions to enzymatically generate sub-population of NAs, where each gene specific primer has a sequence complementary to a distinct
        distinct physiological sources to an array of probe NAs stably associated with the surface of a substrate to produce a hybridisation pattern for each of the sources, and comparing the patterns for each of the sources, and comparing the patterns for each of the sources, and comparing the patterns for each of the sources.
                                                                                                                                                                                                                                                                                                                                                                                                           Producing sub-population of labeled nucleic acids, useful for analysing differences in RNA profiles between several different physiological sources, using set of distinct gene specific primers -
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             antisense therapy and as an inhibitor of caspase 7 expression. (I) is useful for inhibiting the expression of caspase 7 in human cells or tissues, and for treating a human having a disease or condition associated with caspase 7 including inflammatory condition, hyperproliferative disorder (cancer), or bone metabolism or cholesterol disorder. (I) is useful for diagnostics, therapeutics, prophylaxis and as research reagent and kits. (I) is useful prophylactically to prevent or delay infection, inflammation or tumour formation. The present sequence represents a PCR primer for human caspase 7, which is used in an example from the present invention.
                                                                                                                                                                                                                                                                                                                                                                        Example 3; SEQ ID No 1225; 11pp; English.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            utilised in differential expression analysis of diseased a normal tissue e.g. neoplastic a normal tissue, or different tissue or subtissue types. The present sequence is a human gene specific PCR primer used in the method of the invention. Note: The sequence data for this patent did not form part of the printed specification, but was obtained in electronic format directly from USPTO at
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              1605 TGTTACCACACCCAGGGCTATGAGGA 1630
                                                                                                                                                                                                                                                                                                                                                                                                                                       producing sub-population of labeled nucleic acids, useful for analysing
differences in RNA profiles between several different physiological
sources, using set of distinct gene specific primers -
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Sequence 26 BP; 7 A; 7 C; 7 G; 5 T; 0 other;
physiological sources, comprising the populations for each physiological source to identify differences in the population, where the comparison is preferably performed by hybridising the labeled NAs for each of the distinct physiological sources to an array of probe NAs stably associated with the surface of a substrate to produce a hybridisation pattern for each of the sources, and comparing the patterns for each of the sources, and comparing the patterns for each of the sources, where differential gene expression assays are utilised in differential expression analysis of diseased a normal tissue e.g. neoplastic a normal tissue, or different tissue or
                                                                                                                                                                                                                conditions to enzymatically generate sub-population of NAS, where each gene specific primer has a sequence complementary to a distinct mRNA, and each labeled NA is generated using a single gene specific primer. The method is useful for producing a sub-population of labeled NAS which is useful for analysing the differences in the RNA profiles
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          05-MAR-2002

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          subtissue types. The present sequence is a human gene specific PCR primer used in the method of the invention. Note: The sequence data for this patent did not form part of the printed specification, but was obtained in electronic format directly from USPTO at
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Sequence 26 BP; 4 A; 7 C; 7 G; 8 T; 0
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        http.wipo.seqdata.uspto.gov/sequence.html?DocID=6352829B1
                           is also useful for developing novel assays for a wide range of post-translational activities, such as proteclysis, phosphorylation, dephosphorylation, glycosylation, methylation, sulfation, prenylation, disulfide bond formation and ADP-ribosylation within cells. The recombinant DNA molecule of the invention is useful for creating transgenic animals useful as disease models and transgenic plants with improved disease resistance or other favourable traits. The present sequence is a PCR primer which is used for the amplification of mammalia
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            04-FEB-2000; 2000US-0498098

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             AAD13077
                                                                                                                                                                   endoproteases. The method is useful for detecting an activity such as protease, protein kinase or phosphoprotein phosphatase activity and is also useful for identifying modulators of these activities. The method
                                                                                                                                                                                                                   The present invention relates to a method for destabilising a target protein in a cell. The method comprises a linker moiety which operatively couples a target protein (a reporter moiety) to a linear multimerised destabilising domain, which is non-cleavable by a -NH-ubiquitin protein
                                                                                                                                                                                                                                                                                                                                                             Destabilizing proteins in living cells, by coupling a target protein linear multimerized destabilization domain non-cleavable by -NH-ubiquitin protein endoproteases, comprising two copies of the
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         (AURO-) AURORA BIOSCIENCES CORP

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           Matches
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Query Match
                                                                                 AAZ65654 to AAZ69578 represent human biallelic markers from the present invention, which contain a polymorphic base at position 24 of their nucleotide sequences. AAZ69579 to AAZ77440 represent amplification primers for the biallelic markers. The biallelic markers of the invention have a variety of uses: they can be used for high density mapping of the human genome, and in complex association studies and haplotyping studies which are useful in determining the genetic basis for disease states. Compositions and methods of the invention can also be useful for the identification of the targets for the development of pharmaceutical agents and diagnostic methods, as well as the characterisation of the differential efficacious responses to and side

                                                                                                         The present invention describes a conditionally lethal molecule (A) comprising a chemical inducer binding domain and an apoptosis inducing factor, where the apoptosis inducing factor is an apoptosis signal transducing factor. A vector encoding (A) is useful for treating a disease, e.g. a hyperproliferative disease that is benign or malignant, or atherosclerosis. The nucleotide sequence (I) encoding (A) can be used to cause regression of a thmour, reduction in tumour size or reduction in PSA levels, by transfecting the nucleic acid into cells of the tumour. (I) can also be used to affect the rate of cell proliferation caused by BPH by transfecting (I) into prostate cells. (I) is also used to induce apoptosis in a cell as well as for determining the biological role of a cell type. The conditionally lethal gene is non-toxic unless and require membrane localisation and bypasses

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           selection marker gene (preferably the colour selection marker is the Escherichia coli lac2 gene and the dominant selection marker is the Escherichia coli lac2 gene and the dominant selection marker is the eclpl.2 E.coli hph or gpt gene). The present sequence represents the oelpl.2 oligonucleotide used in the construction of the plasmid vector pZgpt-a The DNA constructs and method are used for the production of vaccines, separately acceptable.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 cassette from the construct DNA. The DNA molecule preferably contains one or more foreign DNA segments of a gene encoding an antigen of a pathogen (especially HIV env, HIV gag, HIV gagpol, HIV nef, HBV preSI-S2-S surface antigen gene, tick-borne encephalitis preM gene or tick-borne encephalitis E gene), and has a double selection marker cassette which is flanked by at least two direct repeat DNA sequences, where at least one foreign DNA segment does not occur within the DNA sequence bounded by the direct repeat sequences and where the double selection marker cassette comprises a dominant selection marker gene and a colour cassette comprises a dominant selection marker gene and a colour cassette comprises a dominant selection marker gene and a colour cassette comprises a dominant selection marker gene and a colour cassette comprises a dominant selection marker gene and a colour cassette comprises a dominant selection marker gene and a colour cassette comprises a dominant selection marker gene and a colour cassette which the direct case of the colour cassette comprises a dominant selection marker gene and a colour cassette which the direct case the colour cassette comprises a dominant selection marker gene and a colour cassette comprises a dominant selection marker gene and a colour cassette comprises a dominant selection marker gene and a colour cassette comprises a dominant selection marker gene and a colour cassette comprise case case the colour case the colour
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     cytoplasmic DNA viruses for vaccine production. The method involves inserting a construct DNA molecule into the genome of a eukaryotic cytoplasmic DNA virus, transfecting cells with the virus, and selecting a recombinant virus that does not contain the double selection marker
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                Recombinant eukaryotic cytoplasmic DNA virus; vaccine production; double selection marker; attenuated live pox virus; HIV; HBV; surface antigen gene; encephalitis; tick-borne; ss.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             prodn. of recombinant eukaryotic cytoplasmic DNA viruses for vaccine

The PCR product XhoI fragment was ligated into pEt-15b inducible E. coli expression vector. The resulting plasmid encoded a polypeptide comprising a 23-residue N-terminal peptide (AAM15248) contg. a hexahistidine tag and thrombin cleavage site, fused to Ala24 of CHM<sup>-1</sup>. Hexahistidine-tagged CMH<sup>-1</sup> (Ala24-Gln303) was produced in E. coli BM21 (DE3) transformants.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     DNA encoding active, activatable or inactive cysteine protease CMH-1 - useful in gene therapy for promoting and inhibiting apoptosis and for diagnosing cells with potential for apoptosis
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              09-MAY-1997
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      Synthetic

The invention relates to a new isolated DNA fragment (A) which has transcription enhancing activity and is defined as: (a) consisting of part of the first intron of the tyrosine hydroxylase (TH) gene, especially an allele of the HUMTHO1 microsatellite; or (b) possessing the sequence (I): (TCAT)n-(CAT)o-(TCAT)p (I) n = 1-50; o = 0-20; and p = 0-50. The new enhancers are incorporated into expression cassettes and plasmid or viral vectors for expressing proteins in vitro, in vivo or ex vivo. They are especially intended for use in mammalian cells for gene therapy, e.g. of cancer or restrenceis

The PCR product Xhoi fragment was ligated into pEt-15b inducible E. coli expression vector. The resulting plasmid encoded a polypeptide comprising a 23-residue N-terminal peptide (AAW15248) contg. a hexahistidine tag and thrombin cleavage site, fused to Ala24 of CHM-1. Hexahistidine-tagged CMH-1 (Ala24-site, fused to Ala24 of CHM-1.
                                                                                                                                                                                                                                                                                                                     WPI; 2001-465210/50.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 28-DEC-2000;

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                proteins, cytochromes, kinesins, cytokines, interferons, interleukins, G-protein coupled receptors and thioesterases. The present sequence is one such oligonucleotide. The oligonucleotides and the peptides encoded by them may be used in the prevention, diagnosis and treatment of diseases associated with inappropriate expression of the proteins listed above. Disorders that may be prevented, diagnosed and/or treated include multifactorial diseases with a genetic component, such as autoimmune diseases (e.g. rheumatoid arthritis, multiple sclerosis, diabetes,
                       AAI73060 to AAI79867 represent isolated human polymorphic polynucleotide sequences (I), which contain single nucleotide polymorphisms (SNPs). AAM53114 to AAM53129 represent peptides related to human polymorphic polynucleotide sequences. The sequences can be used in gene and protein therapy, and in vaccine production. (I) and the polypeptides encoded by them may be used in the prevention, diagnosis and treatment of diseases associated with inappropriate expression of polymorphic polypeptides. For example, (I) may be used to treat disorders by rectifying mutations or deletions in a patient's genome that affect the activity of polypeptides by expressing inactive proteins or to supplement the patients own production of polypeptide. Additionally, (I) and its

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  QУ
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 Matches
                                                                                                                   This sequence represents a specifically claimed DNA fragment derived from the first intron of the tyrosine hydroxylase gene containing an allele of the HUMTHO1 microsatellite. The invention relates to a new isolated DNA fragment (A) which has transcription enhancing activity a is defined as: (a) consisting of part of the first intron of the tyrosine hydroxylase (TH) gene, especially an allele of the HUMTHO1 microsatellite; or (b) possessing the sequence (I): (TCAT)n·(CAT)o-(TCAT)p (I) n = 1-50; o = 0-20; and p = 0-50. The new enhancers are incorporated into expression cassettes and plasmid or viral vectors for expressing proteins in vitro, in vivo or ex vivo. They are especially
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  1473 AATGATTCTGATATGTATCCATCAGGATCCAGTCTGGAAAACAGAA 1518
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        antibodies may also be used to down regulate expression and activity. The antibodies may also be used as diagnostic agents for detecting the

                                                                                                                                                                                                                                                                                                                                        PCR primers AAC62131-33 were used to amplify the left and right ends of the bovine adenovirus type 1 (BAV-1) genome. BAV-1 exhibits a complex sequence organisation at its left and right ends. The genome exhibits an inverted terminal repeat (ITR) of 578 bp. A sequence of 419 bp is repeated twice at the left end of the genome. A single inverted copy of this repeat occurs at the right end of the genome. Foreign DNA sequence inserted into the early gene region 3 (E3) or E4 of BAV-1. The recombinant adenovirus is useful for inducing an immunological response in animals. The recombinant viruses are suitable as vaccines and for

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           Streptococcus bacteria, particularly S. agalactiae and S. pyrogenes. Nucleic acids encoding (I) are used to detect Streptococcus in a biological sample. (I) is used to determine whether a compound binds to (I). A composition comprising (I) or a nucleic acid encoding (I), may be used as a vaccine or diagnostic composition. The disease caused by Streptococcus that is prevented or treated may be meningitis. Nucleic acid encoding (I) may be used to recombinantly produce (I) and may be used in gene therapy. Antibodies to (I) are used for affinity chromatography, immunoassays, and distinguishing/itentifying strentocous proteins.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            The invention relates to a protein (ABP25413-ABP30895) from group B streptococcus/GBS (Streptococcus/GBS (GBC)) comprising one of 5483 sequences (S1), given in the specification. The proteins have antibacterial and antiinflammatory activity. (I), nucleic acids encoding (I), ABN66044-ABN71526 and antibodies that bind (I) are used in the manufacture of medicaments for the treatment or prevention of infection or disease caused by

The method involves inserting a construct DNA molecule into the genome of a eukaryotic cytoplasmic DNA virus, transfecting cells with the virus, and selecting a recombinant virus that does not contain the double selection marker cassette from the construct DNA. The DNA molecule preferably contains one or more foreign DNA segments of a gene encoding an antigen of a pathogen (especially HIV env, HIV gag, HIV gapol) HIV nef, HBV preS1-S2-S surface antigen gene, HBV S1-S2-S surface antigen gene, tick-borne encephalitis E gene), and has a double selection marker cassette which is flanked by at least two direct repeat DNA sequences, where at least one foreign DNA segment does not occur within the DNA sequence bounded by the direct repeat DNA sequence consider the dealth of the DNA sequence.
                                                                                                                                                                                                                                                                                                                                                                                                                                                    2060 ATGTGCAAAATCTGTTATAGCTTTAAAATATATATCTGGAACTTTT

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Qy
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Matches
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        Query Match
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      affinity against the target molecule. Use of the antibody results in antiasthmatic; antiallergic; ophthalmological; dermatological and antiinflammatory activity. The antibodies are useful for treating IgE-mediated disorders such as asthma, allergic rhinitis, conjunctivitis, eczema, urticaria and food allergies. The mutant antibodies produced by the above mentioned nucleic acids may also be used as affinity purification agents and in diagnostic assays for detecting the expression of an antigen of interest in specific cell, tissues or serum. Amino acid sequences AAB76936-AAB76960 represent fragments of anti-IgE antibodies of the invention. Polynucleotide sequence AAF69253 represents an expression plasmid used in the course of the invention, and oligonucleotides.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               Immunosuppressive; immunostimulatory; antiinflammatory; cytostatic; neuroprotective; antinicrobial; gene therapy; vaccine; amylase; cancer; amyloid protein; angiopoietin; appotosis related protein; cadherin; cyclin; polymerase; oncogene; histone; kinase; colony stimulating factor; complement related protein; cytochrome; kinasin; cytokine; interferon; interfeukin; G-protein coupled receptor; thioesterase; inflammation;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        (R-structures) in a nucleic acid sequence, employing a memory device. The method is also useful for identifying viral nucleic acid sequences that form territary structures. The ability to identify such structures or sequences may lead to faster development of anti-viral therapies.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        1023 CTCTTGAAATATTCAGAAATTCTCCAGGATTTTAATTTC 1061
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Computerized method for identifying and locating resonating, self-hybridizing nucleic acid elements comprises employing a memory device, which has computer program instructions for creating data structures and operator modules
Claim 1; Page 1944; 4143pp; English.
                                                           cancer, autoimmune diseases and infections
                                                                    Polymorphic nucleic acids encoding e.g. amylases, cyclins, polymerases, oncogenes and histones, useful for diagnosing and treating, e.g. cancer, autoimmune diseases and infections -
                                                                                                                                                                                 WPI; 2001-465210/50.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        Sequence 50 BP; 21 A; 8 C; 6 G; 15 T; 0 other;
                                                                                                                                  The present sequence is part of an essential gene from Drosophila melanogaster. Lack of expression of the protein encoded by this gene leads to a lethal or semi-lethal phenotype. The invention relates to 902 nucleic acid sequences from genes encoding proteins which are thought to be essential, and to a screening assay for which are thought to be essential.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  Drosophila melanogaster
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           17-JUL-2001 (first entry)
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           AAH29638 standard; DNA; 47
                                                      identifying compounds which have a physiological effect on these proteins. Suitable compounds are useful as pesticides and may be used in conjunction with other pesticides and herbicides for crop protection. The gene corresponding to the present sequence is located
                                                                                                                                                                                                                                                                                                   Screening assays for used for identifying compounds having a physiological effect on proteins identified as being essential
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              06-SEP-2000; 2000WO-GB03444.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  Matches
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Best Local Similarity
                                                                                                                                                                                                                                 presence or absence of a predetermined endogenous nucleic acid target sequence (ENAT). The method comprises hybridising a probe having an identifier nucleotide (IN) with ENAT which is treated with an enzyme that depolymerises the 3' end of hybridised NA to release the INS.

MI is used for determining the number of known sequence repeats present in a nucleic acid target sequence in a nucleic acid sample. The method is also useful for determining whether a nucleic acid target sequence in a sample is an allele from a homozygous or heterozygous locus. The method is also useful for detection of mutations, translocations and SNPs in nucleic acids (including those associated with genetic disease), determination of viral load, species identification, sample contamination, and analysis of forensic samples. AAA86791 to AAA87079 and AAB12817 represent sequence which are used in the exemplification of the creation of the contamination of the contaminat
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     18-FEB-1999;

                                                                                                                                                                                                                                                                   PCR primers T50-pr3 (AAT66996) and T50-pr4 (AAT66997) was used to amplify Mch3-alpha cDNA (see also AAT66992). CDNA encoding the p20 and p12 subunits of Mch3-alpha was also amplified (see also AAT66998-7000). The amplified cDNA fragments were used to construct recombinant baculovirus vectors to allow expression of Mch3-alpha (see also AAM15262) polypeptides in Sf9 insect cells. Full-length Mch3-alpha caused approx. 50% of the Sf9 cells to undergo apoptosis within 48 hr post-infection. The subunits were non-apoptotic when

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     vector under control of the SR-alpha promoter. COS cells transiently transfected with the vector resulted in high expression of a truncated CMH-1 protein. Over-expression
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        PCR primers (AAT66973-74) were used to produce a cDNA fragment encoding an N-terminally T7-tagged cysteine protein CMH-1 lacking the first 23 amino acid residues of the proenzyme (see also AAW15247). Amplified DNA was subcloned into an SV40-based expression
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Sequence 33 BP; 10 A; 4 C; 7 G; 12 T; 0 other;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     DNA encoding active, activatable or inactive cysteine protease CMH-1 - useful in gene therapy for promoting and inhibiting apoptosis and for diagnosing cells with potential for apoptosis
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                Example 2; Page 23; 48pp; English.

The method involves inserting a construct DNA molecule into the genome of a eukaryotic cytoplasmic DNA virus, transfecting cells with the virus, and selecting a recombinant virus that does not contain the double selection marker cassette from the construct DNA. The DNA molecule preferably contains
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     one or more foreign DNA segments of a gene encoding an antigen of a pathogen (especially HIV env, HIV gag, HIV gagpol, HIV nef, HBV preSI-S2-S surface antigen gene, HBV SI-S2-S surface antigen gene, HBV SI-S2-S surface antigen gene, tick-borne encephalitis preM gene or tick-borne encephalitis preM gene or tick-borne encephalitis E gene), and has a double selection marker cassette which is flanked by at least two direct repeat DNA sequences, where at least one foreign DNA segment does not occur within the DNA sequence bounded the contraction of the present DNA sequence.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      Prodn. of recombinant eukaryotic cytoplasmic DNA viruses for vaccine prodn. - using novel construct contg. foreign DNA and double selection {\tt marker}
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      E.coli hph or gpt gene). The present sequence represents the elpl.11 oligonucleotide used in the construction of the plasmid vector pZgpt-a The DNA constructs and method are used for the production of vaccines,
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         by the direct repeat sequences and where the double selection marker cassette comprises a dominant selection marker gene and a colour selection marker gene (preferably the colour selection marker is the Escherichia coli lacz gene and the dominant selection marker is the
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              A method has been produced for the production of recombinant eukaryotic

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         comprising a tightly regulatable control region operably linked to a nucleic acid sequence encoding a peptide (P), growing the transformed cell under conditions that repress expression of (P) and then inducing its expression which, if is inhibitory to host cell growth, is indicative of BP expression. An antimicrobial peptide from the present invention, which is stabilised, is used for treating a patient having a condition treatable with a peptide drug. The stabilised are also used for inhibiting the growth of a microbe. The new antibacterial peptides are useful to treat various pathogenic bacteria such as Staphylococci, Streptococci and Enterococci which are the primary causes of the stabilised perimary causes 
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   of noscomial infections. Novel inhibitor peptides identified by the method can be medical treatments and theraples directed against microbial infection. Also, these novel inhibitor peptides can be used, in turn, to identify additional novel antibacterial peptides using a synthetic approach, and can also be used to elucidate potential new drug targets. The inhibitor peptide target which is inactivated is identified using reverse genetics by isolating mutants that are no longer inhibited by the peptide. These mutants are then mapped in order to precisely determine the protein target that is inhibited. AAA56033 to AAA56106 and AAY90964 to AAY90999 are sequences used in the exemplification of the
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                (UYGE-)

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            CC therapy, and in vaccine production. (I) and the polypeptides encoded by them may be used in the prevention, diagnosis and treatment of diseases CC associated with inappropriate expression of polymorphic polypeptides. CC For example, (I) may be used to treat disorders by rectifying mutations CC or deletions in a patient's genome that affect the activity of polypeptides by expressing inactive proteins or to supplement the CC patients own production of polypeptide. Additionally, (I) and its CC complementary sequences may also be used as DNA probes in diagnostic assays to detect and quantitate the presence of similar nucleic acids in samples, and therefore which patients may be in need of restorative CC therapy. The polypeptides encoded by (I) may be used as antigens in the antibodies may also be used to down regulate expression and activity. The antibodies may also be used as diagnostic agents for detecting the presence of polymorphic polypeptides. The antibodies may also be used as diagnostic agents for detecting the presence of polymorphic polypeptides in samples.

   The invention relates to a human prostate cancer predisposing gene coding for an HPC2 polypeptide. The DNA and protein sequences are useful as diagnostic reagents for identifying a mutant HPC2 nucleotide sequence in a suspected mutant HPC2 allele by comparing the sequence of the suspected mutant HPC2 allele with a wild-type HPC2 sequence. The sequences are also useful for detecting an alteration in HPC2, where the alteration is
                                                                                                                                                                              Novel nucleic acid sequence encoding HPC2 polypeptide, which is marker for prostate cancer, is useful in gene therapy techniques to restore HPC2 normal levels by which neoplastic growth is suppressed in

                                                                                                                                                The invention relates to a protein (ABP25413-ABP30895) from group B streptcocccus/GBS (Streptcocccus/GBS (Streptcocccus/GBS (Streptcocccus/GBS (STreptcocccus/GAS (SI), given in the specification. The proteins have antibacterial and antiinflammatory activity. (I), nucleic acids encoding (I), ABN66044-ABN71526 and antibodies that bind (I) are used in the manufacture of medicaments for the treatment or prevention of infection or disease caused by Streptcocccus bacteria, particularly S. agalactiae and S. pyrogenes. Nucleic acids encoding (I) are used to detect Streptcoccus in a compound binds to biological sample. (I) is used to determine whether a compound binds to used as a vaccine or diagnostic composition. The disease caused by Streptcocccus that is prevented or treated may be meningitis. Nucleic acid encoding (I) may be used in gene therapy. Antibodies to (I) are used for affinity chromatography, immunoassays, and distinguishing/identifying Streptcocccus proteins. The present sequence is that of a PCR primer, useful to the invention.
                                                                                 Query Match

                                                                                                                                                                                                                                                                                                                                                                                                                                                             CC The present invention relates to oligonucleotides encoding polymorphic CC variants of proteins related to amylases, amyloid proteins, angiopoietin, CC apoptosis related proteins, cadherin, cyclin, polymerase, oncogenes, CC histones, kinases, colony stimulating factors, complement related CC proteins, cytochromes, kinesins, cytokines, interferons, interleukins, CC G-protein coupled receptors and thioesterases. The present sequence is CC one such oligonucleotide. The oligonucleotides and the peptides encoded by them may be used in the prevention, diagnosis and treatment of CC diseases associated with inappropriate expression of the proteins listed CC above. Disorders that may be prevented, diagnosed and/or treated include CC diseases (e.g. rheumatoid arthritis, multiple sclerosis, diabetes, CC systemic lupus erythromatosus and Grave's disease), inflammation, cancer (e.g. cancers of the bladder, brain, breast, colon and kidney, CC leukaemia), diseases of the nervous system and an infection of pathogenic corrections.
                                                                                                                                                                                                                                                                                                                                                                                         Matches
                                                                                                                                                                                                                                                                                                                                                                                                        Query Match

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          CC and antimotobial activities from the present human nucleic acid oligonucleotides comprising one or more single nucleotide polymorphisms (SNPS). ABB5631 CC to ABB56903 represent human peptides encoded by some of the SNP CC oligonucleotides. The sequences from the present invention can have immunosuppressive, cytostatic, antiinflammatory, neuroprotective and antimicrobial activities. Nucleic acids, polypeptides, oligonucleotides can antihodies from the present invention can be used for treating a cc subject suffering from, at risk for, or suspected of, suffering from a cc pathology mascribed to the presence of a sequence polymorphism. The cc pathology may be autoimmune diseases, inflammation, cancer, diseases of the nervous system, and infection by pathogenic microorganisms. The SNPs CC are also useful for determining which forms of a characterised cc polymorphism are present in individuals. The antibodies may be used in cc the detection, quantitation and/or cellular or tissue localisation of a coplymorphic protein (e.g., for use in measuring levels of the colymorphic protein within appropriate physiological samples).
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           Matches
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Query Match

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         poultry against ND. The NDV NP mutant is also useful for manufacturing a vaccine against ND in poultry, particularly for in ovo administration. The vaccine is also useful in a ND control program to distinguish vaccinated animals from animals infected with naturally occurring NDV The NDV mutant is also useful as a marker vaccine to allow serological distinction between animals vaccinated with conventional vaccine strains from that of animals immunised with a vaccine based in this NDV mutant. The NDV vaccine is useful in chickens, as well as in other poultry, e.g. turkey, pigeons, quails, pheasants, guinea fowl or partridges. All currently used whole virus based live and inactivated animals cannot be distinguished from infected animals with standard serological tests.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       The invention relates to a Newcastle disease virus (NDV) mutant, which lacks an immunogenic epitope on a NDV protein as a result of a mutation in a gene encoding the protein, where the NDV mutant lacks an epitope located within a regions (amino acids 447-455 and 443-460) of the nucleoprotein (NP). Also included are a vaccine against Newcastle disease (ND) in poultry comprising the DNA mutant in a live or inactivated form,
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      New Newcastle disease virus (NDV) mutant, useful as a vaccine for protecting poultry (e.g. chicken) against Newcastle disease or as a protecting poultry (e.g. chicken) against Newcastle disease or as a protection to distinct vaccinated animals from those infected makes the constitution of the constitution
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   1313 GGCAAAAAGAATCCCAATGTTTGACAAAACACAGC 1347
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       the present NDV mutant as an embryo vaccine is also proven as effective and economical due to the early age of resistance to a specific disease. The present sequence represents a PCR primer used to delete DNA corresponding to amino acids 442-489 of the nucleoprotein.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      (e.g. haemagglutination inhibition or virus neutralisation). The presen NDV immunogenic mutant, being a marker vaccine, enables serological differentiation of vaccinated animals from infected animals. The use of
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            poultry by examining a sample of the animal for the presence or absence of antibodies reactive with the immunodominant epitope located within the region of the NP. The NDV mutant is useful as a vaccine for protecting
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         and a pharmaceutical carrier or diluent and determining NDV infection in

All currently used whole virus based live and inactivated ND vaccines have a major drawback, in that vaccinated animals cannot be distinguished from infected animals with standard serological tests (e.g. haemagglutination inhibition or virus neutralisation). The present NDV immunogenic mutant, being a marker vaccine, enables serological differentiation of vaccinated animals from infected animals. The use of the present NDV mutant as an embryo vaccine is also proven as effective and economical due to the early age of resistance to a specific disease. The present sequence of the present

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      AAZ65654 to AAZ69578 represent human biallelic markers from the present livention, which contain a polymorphic base at position 24 of their nucleotide sequences. AAZ69579 to AAZ77440 represent amplification primers for the biallelic markers. The biallelic markers of the livention have a variety of uses: they can be used for high density mapping of the human genome, and in complex association studies and haplotyping studies which are useful in determining the genetic basis for disease states. Compositions and methods of the invention can also be useful for the identification of the targets for the development of pharmaceutical agents and diagnostic methods, as well as the characterisation of the differential efficacious responses to and side of the targets for the development of the differential efficacious responses to and side of the targets for the development of the differential efficacious responses to and side of the targets for the development of the differential efficacious responses to and side of the targets for the development of the differential efficacious responses to and side of the targets for the development of the differential efficacious responses to and side of the targets for the development of the differential efficacious responses to and side of the targets for the development of the differential efficacious responses to and side of the targets for the development of the differential efficacious responses to and side of the targets for the development of the differential efficacious responses to and side of the targets for the development of the differential efficacious responses to and side of the targets for the development of the differential efficacious responses to and side of the differential efficacious responses to and targets for the development of the differential efficacious responses to and targets for the development of the differential efficacious responses to the development of the differential efficacious responses to the development of the differential efficacious response
                                                                                                                                                                                                                                     Human SNP oligonucleotide #3629.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             apoptosis related proteins, cadherin, cyclin, polymerase, oncogenes, histones, kinases, colony stimulating factors, complement related proteins, cytochromes, kinesins, cytokines, interferons, interleukins, G-protein coupled receptors and thioasterases. The present sequence is one such oligonucleotide. The oligonucleotides and the peptides encoded by them may be used in the prevention, diagnosis and treatment of diseases associated with inappropriate expression of the proteins listed above. Disorders that may be prevented, diagnosed and/or treated include multifactorial diseases with a genetic component, such as autoimmune diseases (e.g. rheumatoid arthritis, multiple sclerosis, diabetes, systemic lupus erythromatosus and Grave's disease), inflammation, cancer (e.g. cancers of the bladder, brain, breast, colon and kidney, leakemia), diseases of the nervous system and an infection of pathogenic

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      therapy, and in vaccine production. (I) and the polypeptides encoded by them may be used in the prevention, diagnosis and treatment of diseases associated with inappropriate expression of polymorphic polypeptides. For example, (I) may be used to treat disorders by rectifying mutations or deletions in a patient's genome that affect the activity of polypeptides by expressing inactive proteins or to supplement the patients own production of polypeptide. Additionally, (I) and its complementary sequences may also be used as DNA probes in diagnostic assays to detect and quantitate the presence of similar nucleic acids in samples, and therefore which patients may be in need of restorative therapy. The polypeptides encoded by (I) may be used as antigens in the production of antibodies may also be used to down regulate expression and activity. The antibodies may also be used as diagnostic agents for detecting the

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Ş
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            CC clone DNA sequence isolated using the method of the invention. The method CC is for analysing nucleic acid, a sample, and comprises: (a) providing CC a sample containing nucleic acid, a first oligonucleotide primer comprising a CTG repeat, a second oligonucleotide primer comprising a CC CAG repeat and a polymerase and PCR reagents; (b) preparing the nucleic acid with the carido so that it is amplifiable; (c) amplifying the nucleic acid with the CC first and second primers; and (d) detecting the amplified product. The method is used to distinguish between the expression of genes in two or CC more biological samples, e.g. body fluids, cells, solid tissue or solid CC and liquid foods. It can be used in medical diagnostics, e.g. to CC differentiate between normal and diseased tissue or to assess the CC variation within monozygotic twin pairs. The method allows the isolation CC and analysis of genome subsets containing CAG repeats which are known to be important in a number of neurological diseases including Huntington's CC chorea. The method uses PCR suppression, in which only fragments which CC contain a target repeat are efficiently amplified. This allows accurate identification of differentially expressed genes in various cell types. CC contents containing CAG repeats.

                                                                                                                                                                                                                                                                                                                               For example, (I) may be used to treat disorders by rectifying mutations or deletions in a patient's genome that affect the activity of polypeptides by expressing inactive proteins or to supplement the patients own production of polypeptide. Additionally, (I) and its complementary sequences may also be used as DNA probes in diagnostic assays to detect and quantitate the presence of similar nucleic acids in samples, and therefore which patients may be in need of restorative therapy. The polypeptides encoded by (I) may be used as antigens in the production of antibodies specific for polymorphic polypeptides. The antibodies may also be used as diagnostic agents for detecting the restoration and activity.
                                                                                                                                                                                                                                                                    Sequence 50 BP; 4 A; 9 C; 2 G; 35 T; 0 other;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   therapy, and in vaccine production. (I) and the polypeptides encoded by them may be used in the prevention, diagnosis and treatment of diseases associated with inappropriate expression of polymorphic polypeptides.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       sequences (I), which contain single nucleotide polymorphisms (SNPs). AAM53114 to AAM53329 represent peptides related to human polymorphic polynucleotide sequences. The sequences can be used in gene and protein
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       AAI73060 to AAI79867 represent isolated human polymorphic polynucleotide
